

Assignment – Computer Apps

During the last week or so you have learned (hopefully) how to use the built in tools in Microsoft Word to create a proper research paper. Your final assignment for this section is to create a short research paper of your own.

- The paper should be MLA style
- Choose a topic that interests you and research it.
- Find at least three sources about that topic. You may need to find more than three to get to the length of paper you need.
 - One of these sources must be something other than a website.
- Create a research paper using Microsoft word. You need to use all of the functions you learned in the packet.
 - Correctly formatted header (your last name, page number, right aligned)
 - Parenthetical Citations – these are the shortened versions of the sources that you find in the paragraphs their selves.
 - At least one footnote
 - Length: your paper needs to be two FULL pages, not including the bibliography
 - You need a works cited bibliography on the third page of the paper
- This assignment is worth 50 TEST points. This is a big part of your current grade for this class. Take it seriously.
- The bigger part of your grade will be whether you know how to use the Microsoft word functions rather than how you wrote the paper; however that will be part of your grade so you need to pay attention to that as well.
- Spelling and grammar use IS part of your grade.
